ARENA AX - BACnet Supervisor

Product Data

## OVERVIEW

ARENA<sup>AX</sup> is a BACnet certified web-based supervisor utilizing the Niagara<sup>AX</sup> Framework<sup>®</sup> for small to big size systems.

It is used to supervise HVAC systems and non-HVAC systems (e.g. lighting, security, life safety) in a building or across multiple buildings. The primary use is in applications where multiple HAWK and/or EAGLE controllers are networked together and systems based on TCP/IP communication standards like BACnet / IP, oBIX, OPC (client), Modbus TCP, EIB-KNX/IP, and SNMP can be directly integrated by ARENA<sup>AX</sup>.

ARENA<sup>AX</sup> serves real time graphical information to standard web-browser clients and also provides server-level functions such as: centralized data logging, archiving, alarming, real time graphical displays, master scheduling, system-wide database management, and integration with enterprise software applications.

In addition, it provides a comprehensive, graphical engineering toolset for application development.

ARENA<sup>AX</sup> helps to maximize operating and services opportunities and to minimize associated costs.
